

Rotaguard

'The all-round detection and anti-climb guard'

Rotaguard is an advanced detection system and anti-scaling barrier for walls, gates and fences, which is durable and easy to install. It provides an inexpensive, yet effective solution to property protection, at a time when property owners are legally responsible for injury to intruders.

The system incorporates Geoquip's renowned Defensor detection system which will alert security personnel to any attempted intrusion and allow alarms to be verified by the unique 'listen in' audio verification.

- /// Safe, effective barrier
- /// Delays intrusion
- /// Detects on attack
- /// 10 year sensor and barrier guarantee
- /// Suitable for manned and remotely monitored sites
- /// Audio verification as standard
- /// Lightweight construction

Key Features

The system design is unique. It consists of a series of curved vanes, each of which revolves freely around a central shaft. This has been modified to integrate Geoquip's Alpha cable sensor as another unique feature. The rotating vanes create an unstable barrier which moves if anyone attempts to climb over it.

The system is strong and durable, being manufactured from a technically complex high tensile alloy. It is corrosion resistant and therefore suitable for areas vulnerable to pollution. In addition, this corrosion resistance ensures that the metal remains bright and maintains its deterrent effect throughout its life.

The alloy is very lightweight and can therefore be used on mesh or even wooden fencing. This aspect makes Rotaguard easy and quick to install, therefore providing cost benefits to the installer.

In addition to the standard finish, Rotaguard can also be supplied with black polyester powder coating and other colours can be specified to order.

Simple to install, cost effective and attractively designed Rotaguard provides an all round solution to perimeter protection.

An important consideration for property owners is the safety of visitors to their site, even intruders, as recent court cases have shown. Rotaguard is inherently safe and does not contravene Health & Safety regulations, COSHH guidelines or any other civil or criminal laws. Moreover, the intruder cannot try to overcome the barrier by covering it or jamming it, due to the unique curved vanes.
